

Case Study (USA): Tennessee Concert Sound

Tennessee Concert Sound Loves Xilica Digital Processors

Tennessee Concert Sound of Nashville Tennessee in the USA has tried just about every DSP brand on the market and now uses and recommends Xilica.

Tennessee Concert Sound Regional Manager (Consultant and Producer) Dan Coleman - "I have used them all - Rane, dbx, BSS, you name it - and nothing on the planet is quite as flexible, as easy to program or sounds as good as Xilica DSP.

It offers the highest level of audio excellence that can be found in a digital processor with 40 Bit Floating Point DSP Architecture (and 96kHz sampling). No DSP offers more bang for the buck".

Many complex digital processors have to be programmed using a computer. With the Xilica XD and XP Series that is not the case.

Dan loves that we offer full front panel control and programming along with software GUI based programming and control.

Dan Coleman - "It is easy to make system alterations on the fly during a live show using the front panel controls without risk or difficulty".

Dan further stated - "I use Xilica DSP in my Live Sound Rigs and in my Studio Rigs. Applications also include 5.1 surround sound for video presentation work. The Xilica XP-8080 (8x8) model in particular is ideal for processing the 5.1's L/R mains, front center fill, subs, mid-side fills/delays and the rear fills/delays and because the XP-8080 model uses Euro/Phoenix style connections on the rear (XLR's on all smaller Xilica models) I can use pre-wired trunk lines and quickly swap out the processor between live sound and studio applications".

Everyone at Xilica Audio Design thanks Dan Coleman and Tennessee Concert Sound for providing this Xilica product testimonial and for their loyal support of Xilica digital processors.
