

Case Study (Europe): The Harbor Club, Amsterdam

ADI Group and The Harbour Club, Amsterdam Choose Xilica Audio Design as their DSP Loudspeaker Management System.

With existing locations in Rotterdam and Scheveningen, The Harbour Club is expanding its horizons by opening a third venue in Amsterdam.

Dutch Audio Veteran Jeroen ten Brinke from the ADI Group was the Professional Audio Integrator for the project and chose to install Xilica XD-Series Digital Processors at The Harbour Club because of the superb audio performance and value they provide.

The venue is equipped with five Xilica XD-8080 digital processors. They provide system wide audio processing and management for the professional sound system and its custom made speaker systems.

One Xilica XPanel programmable wall control was installed to provide the user with a central control location and was programmed with a specific set of control options.

The Harbour Club, Amsterdam opens their doors to the public on May 10th, 2012 for a bite, some drinks, some dancing and off course an unbelievable sound system experience.

Xilica Audio Design would like to thank ADI Group and The Harbour Club, Amsterdam for their trust and support of Xilica DSP solutions.

We are honoured to play a part in this first class, professional, sound system installation at The Harbour Club.
